

When I started Beta Climbing Designs the BetaStick was our first design project and we launched the product into the UK climbing market in 2002, having enlisted the design help of my long term friend and climbing partner, Tony Whitehouse. Many people felt we were crazy at this time to develop such a niche climbing product – however the concept of BetaStick was born more from necessity than commercial reason.

Still recovering from a serious climbing accident, the need to not smash my body again was my main concern. Taking a ground fall off a sports route before the first bolt was definitely a risk I wasn't prepared to take.

From these small beginnings we have continually improved BetaStick to become the market leader worldwide in remote stick clipping products.

Our commitment to research and development of remote clipping represents a small but significant addition to the climbing equipment market.

Today I am lucky enough to work with a committed team of colleagues who share my passion for climbing and great equipment. I am proud of the quality products we develop and the achievements we have made.

We always try our hardest to meet our customers' expectations – we greatly value your support and feedback.

BetaStick Evo

Raising the bar in remote clipping for more than 15 years

The original BetaStick was born, designed and built in 2002, in Sheffield, UK to smoothly and efficiently remote clip bolts. It has become the market leader in remote clipping devices, worldwide.

The BetaStick Evo is the culmination of 15 years' experience, research and design in remote clipping devices. It has evolved to give all the functionality of the original BetaStick but significantly enhanced with improved features & function:

- 3 brand new models!
- Ultra compact - the ultimate travel clip stick
- Super Standard - the new standard in BetaStick; more compact with more reach
- Ultra Long - a real monster for the practiced climber with a capacity to clip at heights of 6.5m+

- Capacity for lasso clipping and quick draw removal
- Integral hooking feature for rope retrieval
- New pole design to prevent spinning with secure locking mechanisms and a stiffer, more durable build quality
- A dual position spring to securely retain karabiners, optimise gate opening and release smoothly
- Compatible with a wide range of snap gate karabiners – both solid and wire gate
- An ergonomically angled head to easily access bolt hangers in difficult clipping situations
- Clips to harness for 'bolt-to-bolting'

SPECIFICATIONS

Ultra Compact	55 - 238cm
Super Standard	74 - 374cm
Ultra Long	113 - 648cm

Project BrushStick

The Project BrushStick is primarily designed for boulderers to clean out of reach holds, brushing away dirt, dust and excess chalk.

It has been significantly improved for 2018 with the addition of the new Evo pole, which has been developed to prevent spinning. It also has a new secure locking mechanisms and stiffer, more durable build quality.

It is sold complete with the Lapis Uber brush which gives optimal brushing performance with the Project BrushStick.

- Compresses to 86cm to fit inside most standard bouldering mats
- Extends to 264cm with the Lapis Uber brush
- Designed to be compatible with a range of current bouldering brushes
- Head angle is easily adjusted and securely locked to 3 positions – vertical, 45 & 90 degrees
- The M6 bolt is compatible with many camera mounts and selfie stick attachments
- Selfie stick mount available as an optional accessory

SPECIFICATIONS

Project Brush 86 - 264cm

Respect the rock and brush responsibly

Adjustable, lockable, articulated BrushStick for cleaning out of reach holds

carbonate
climbers chalk*

Beta Chalk

High quality European sourced climbers chalk – pure and simple with no funny additives.

Available in block, tablet or ball form to avoid chalk blow outs associated with loose powdered chalk.

Chalk Ball

- 60g
- High quality magnesium carbonate climbers chalk
- Within a mesh sack that allows an excellent sift rate
- The chalk ball fits perfectly in any chalk bag
- Squeeze it to chalk up your hands
- Less messy than powdered chalk

Block Chalk

- 120g
- High quality magnesium carbonate climbers chalk
- The block is split into tabs for ease of splitting
- Use as many tabs as necessary in your chalk bag

Chalk Tablets

- 60g
- High quality magnesium carbonate climbers chalk
- Refill your chalk bag with tablets
- Less messy than powdered chalk

Crushed Bag

- 120g
- High quality magnesium carbonate climbers chalk
- The block are crushed ready for use
- Re-sealable water resistant bag

Beta Tape

Quality non stretch strapping tape primarily used by climbers to support finger tendons and pulleys or as protective hand strapping for jamming.

Beta Tape is micro permeable, highly adhesive and tears easily in both directions. It is also ideal for making removable tape gloves and stays in place well on chalky hands for post warm up taping.

The perfect addition to any climbers first aid kit.

SPECIFICATIONS

Available in three sizes
1.5cm, 2.5cm and 4cm
All in 10m rolls

*Micro-permeable, highly adhesive,
and easy to tear in both directions*
